

movement is contrasted by non-scalar movement. For example, in measures 8 and 9, the soprano voice moves in steps until the first beat of measure 9, where there is a jump of a fifth. This is then followed by more movement in steps to create contrast.

Overall, this section of Rossini's mass closely follows the form and characteristics of a fugue. While it does not follow all of the ~~the~~ contrapuntal rules, this is understandable, as the mass was written after the Baroque era in which fugues were traditionally composed. Rossini incorporated the freedom used in his other work in this piece by fusing it with traditional fugue form, making the piece both traditional and unique.

Really amazing analysis! 20/20!!!
